

Enzycore

Enzycore is a Comprehensive Blend of Enzymes and Whole Food Ingredients Designed to Support Healthy Digestion and Maximize Nutrient Absorption

Digestion is a complicated process made harder by our lifestyle and the effects of aging. Enzyme supplementation complements the body's natural enzyme production and compensates for barriers to optimal digestion – things like aging, poor food choice, chronic stress, and natural enzyme insufficiency.

Enzymes are proteins that break down food into molecules our body can use for energy, or to reassemble into other essential compounds. Enzymes go to work as soon as we put food in our mouth (as part of saliva) and are active in both the stomach and the small intestines.

What does Enzycore Contain?

Proprietary Enzyme Blend

Our comprehensive blend is derived from microbial sources. This type of enzyme can be used at a lower dose than animal-derived enzymes with similar results. Also, microbial enzymes work within a broader range of pH than animal enzymes.† Our blend supports the breakdown of proteins, fat, and carbohydrates and contains:

- ▶ Protein Enzymes
 - Peptidase
 - Proteases
- ▶ Fat Enzyme
 - Lipase
- ▶ Carbohydrate enzymes
 - Acid maltase
 - Alpha-galactosidase
 - Amylase
 - Glucoamylase
 - Invertase
 - Lactase

Bromelain

An enzyme complex extracted from pineapple stems and juice, bromelain has a long history of use in central and South American traditional medicine. When taken with meals, as recommended for Enzycore, it is believed to help break down protein into its component amino acids.†

Glutamine

Glutamine is an amino acid. It is used as a building block for other amino acids and compounds like glutathione. Some of our cells that require a lot of energy (like those in the small intestine) can use glutamine as an energy source. In this way, glutamine supports the integrity of the intestinal lining and the immune cells associated with the intestines. This amino acid can be depleted by stress, which can in turn slow the body's natural regeneration and healing process.†

Kale

This cruciferous vegetable has been linked to good health through a variety of studies. It contains organosulfur compounds and carotenoids like lutein that have been examined for their specific role in activating detox enzymes and supporting eye health, respectively. The benefit from trace amounts of organosulfur and lutein have not been determined, but the amount of kale in this supplement is designed to provide benefit in conjunction with a healthy diet.†

Beet Powder

Beet powder contains betaine, a phytochemical linked to health through its role in chemical reactions. Betaine in the body is a byproduct of the breakdown of another compound, choline, and it is used to convert amino acids from one form to another. Trace amounts of betaine have not been studied, but the amount in this product is designed to provide benefit in conjunction with a healthy diet.†

Please copy for your patients

Introduced in: 2010
Content: 150 Capsules
Vegetarian Product

Supplement Facts:

Serving Size: 1 capsule	
Servings per Container: 150	
	%DV
Calories	2

Vegetarian Enzyme Blend: Acid maltase (1 MaltU), alpha-galactosidase (45 GalU), amylase (1,800 DU), bromelain (32,880 FCCPU), glucoamylase (3 AGU), invertase (170 SU), lactase (325 ALU), lipase (230 FIP), peptidase (820 HUT), protease 3.0 (3 SAPU), protease 4.5 (4,930 HUT), protease 6.0 (1,640 HUT).

Proprietary Blend: L-glutamine, kale (whole plant), and beet (root).

Other Ingredients: Cellulose, maltodextrin, and calcium stearate.

Suggested Use: One capsule three times per day with meals, or as directed.

Sold through health care professionals.

Enzycore

How Enzycore Keeps You Healthy

Aging, emotions, and 21st century lives can all lead to less than optimal digestive functioning. Enzycore is designed to offset these conditions and support the normal digestive process.

Aging

After infancy, we all experience a reduction in the enzyme that processes milk sugar (lactose). Supplementation with Enzycore can help digest the lactose in milk. Also, it's common for older people to eat less. In these cases, it's vital for them to extract as many nutrients as possible from each meal. Supplementation can help with this process.†

Emotional Upset

Digestion is closely tied to our nervous system. If we're always in "fight or flight" mode, that state can alter the way digestion takes place: it can speed up, slow down, or change our intestinal microflora. Also, emotional states, like feeling depressed, are associated with poor food choices since foods high in fat or sugar activate the "reward" response in our brain. To offset this cycle, enzyme supplementation can enhance the body's production of enzymes that break down fat and sugar.†

21st Century Life

Rushing has become a national pastime and leisurely meals are increasingly rare. This can lead to less than optimal digestion because we're skipping the "cephalic phase" of digestion: this is when food we smell or taste triggers saliva, gastric and pancreatic juice, as well as intestinal secretions. Bypassing this phase of digestion can have physical effects on how digestion proceeds.†

Digestive Aids

The drugstore digestive aid aisle is longer than ever. Unlike other products, Enzycore is designed to support the digestive tract through the addition of helpful enzymes, building blocks, and whole food ingredients; not through the suppression of the body's natural function.†

What Makes Enzycore Unique

- ▶ It is comprehensive – addresses digestion, but also inflammation and energy needs of intestinal cells through inclusion of glutamine.
- ▶ It contains trace amounts of beneficial phytonutrients from beet powder (betaine) and kale (organosulfur compounds and lutein).
- ▶ Our enzyme blend is made of microbial enzymes, which work throughout a larger pH range.

Certified Organic Farming

A healthy ecosystem is created by using organic farming techniques, such as rotating crops, fertilizing the soil with nutrient-rich cover crops and byproducts from our processing, practicing strict weed control standards, and continually monitoring the health of our plants

- ▶ Assures the soil is laden with minerals and nutrients
- ▶ Ensures plants are nutritionally complete and free from synthetic pesticides

Manufacturing and Quality Control Processes

- ▶ Upon harvesting, nutrient-rich plants are immediately washed and promptly processed to preserve nutritional integrity
- ▶ Degreed microbiologists and chemists in our on-site laboratories continually conduct bacterial and analytical tests on raw materials, product batches, and finished products. This ensures consistent quality and safety
- ▶ Vitamin and mineral analyses validate product content and specifications to assure high-quality essential nutrients are delivered

†These statements have not been evaluated by the Food & Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

Studies on nutrients generally use large doses and these studies, some of which are cited below, are the basis for much of the information we provide you in this publication about whole food ingredients. See the supplement facts for Enzycore.
