Hypothalamus PMG is a Special Combination Formula Containing Bovine Hypothalamus PMG™ Extract, Calcium Lactate, and Magnesium Citrate

Hypothalamus PMG is formulated to help maintain the healthy functioning of the hypothalamus gland. The hypothalamus is one of the central elements of the brain and comprises the neuronal circuitry that controls emotional behavior and motivational drives. The hypothalamus allows communication between the endocrine and central nervous systems. It is the chief region for the integration of sympathetic and parasympathetic activities. Without proper hypothalamic function, the two systems fail to respond appropriately to each other's signals. The hypothalamus gland also produces secretions that are important to the management of cardiovascular function, uterine contractility, and lactation. Certain metabolic activities, such as the delicate maintenance of water balance, sugar and fat metabolism, body temperature control, appropriate sleep programming, appetite and thirst responses, and the secretion of hormones are all facilitated by the hypothalamus gland. It is also involved in the control of the pituitary gland.†

How Hypothalamus PMG Keeps You Healthy

Maintains cellular health

Protomorphogen™ extract is the brand name of Standard Process' extracts derived from nucleoprotein-mineral molecules. The foundation for the function of these uniquely-formulated nucleoprotein-mineral extracts comes from the antigen-antibody reaction that takes place during normal cell maintenance. The antigenic properties promote healthy cellular division, function, and growth. When a tissue needs support, at least a dozen different compounds are formed that can cause white blood cells to travel together toward the compromised area. They include degenerative products of the tissues themselves. These substances strongly activate the macrophage system, and within a few hours, the macrophages begin to devour the destroyed tissue by-products. At times, the macrophages can also affect the structure of the remaining healthy cells. The bovine hypothalamus PMG™ extract in Hypothalamus PMG appears to neutralize the circulating antibody, thereby contributing to the maintenance of cellular health.†

Improves calcium absorption and supports nervous system function

Calcium lactate is a highly soluble calcium salt and naturally bioavailable—it changes to calcium bicarbonate (the type used by the body) in one chemical step. Unlike some other forms of calcium that are less soluble in water and need higher acid concentrations to be absorbed, calcium lactate exists near a more neutral pH and does not require acid conditions to work. The calcium lactate in Hypothalamus PMG is derived from pure-vegetable sources of calcium, not dairy sources. Calcium is important for the healthy functioning of the nervous system and transmission of nerve impulses.†

Sustains metabolic efficiency

While magnesium is present in most cells in only minute quantities, it plays an important role in human metabolism, as does its partner, calcium. It functions in such reactions as nerve conduction and nerve excitability, transfer of energy, muscular activity, and many other specific processes. Magnesium functions as a cofactor, assisting enzymes in catalyzing many chemical reactions. Magnesium and calcium are synergistic, meaning that what they do for the body together, they cannot perform on their own.†

Whole Food Philosophy

Dr. Lee challenged common scientific beliefs by choosing a holistic approach of providing nutrients through whole foods. His goal was to provide nutrients as they are found in nature—in a whole food state where he believed their natural potency and efficacy would be realized. Dr. Lee believed that when nutrients remain intact and are not split from their natural associated synergists—known and unknown—bioactivity is markedly enhanced over synthetic nutrients. Following this philosophy, even a small amount of a whole food concentrate will offer enhanced nutritional support, compared to a synthetic or fractionated vitamin. Therefore, one should examine the source of nutrients rather than looking at the quantities of individual nutrients on product labels.

Each tablet supplies 145 mg bovine hypothalamus PMG[™] extract.

Proprietary Blend: Bovine hypothalamus PMG[™] extract, and magnesium citrate.

Other Ingredients: Calcium lactate, cellulose, and calcium stearate.
