Spleen (Desiccated) Contains Bovine and Ovine Spleen to Promote the Healthy Functioning of the Human Spleen

The spleen is a highly vascular, kidney-shaped organ that sits between the stomach and diaphragm in the left, upper abdomen. It is considered part of the lymphatic system and varies in size and shape both among individuals and in the same individual at different times. Scientists have argued about the specific function of the spleen for many years. However, during the study of this important organ, certain facts have come to light. For example, the spleen plays a major role in immune function and blood cell formation and development. The spleen stores blood and also recycles or, when necessary, destroys red blood cells and platelets. In addition, the spleen manufactures white cells when needed to fight infection. In cases of severe hemorrhage, the spleen comes to the body's rescue by contracting significantly to increase blood volume in less than a minute's time. While we are able to live without a spleen, it is considered an important organ to maintain good health.†

How Spleen (Desiccated) Keeps You Healthy

Supports a healthy spleen

Glandular tissues contain multiple nutrients, such as vitamins, minerals, amino acids, fatty acids, polypeptides, enzymes, coenzymes, synergistic cofactors, and hormone precursors that support the corresponding organ in humans. Cells require the presence of certain raw materials in order to repair and replicate. Each gland or organ taken from an animal source and concentrated for use in glandular therapy contains biochemical substances unique to that specific gland or organ. Often, substituting the external source of specific biochemical compounds supports the corresponding deficiency in the human recipient. Spleen (Desiccated) contains bovine and ovine spleen to provide nutritional support to stimulate the human spleen. †

Spleen (Desiccated)

What Makes Spleen (Desiccated) Unique

Unique Product Attributes

Multiple nutrients from bovine and ovine tissues

- Each tablet supplies 330 mg bovine and ovine spleen
- Extracts from bovine and ovine tissues provide nutrients and support to the corresponding tissues in humans
- Vitamins, minerals, and nutrients from animal tissues work synergistically for maximum effect†

Whole desiccated products provide optimum nutrient activity

- To support the general, healthy functioning of the spleen and the important roles it plays in the proper function of many other organ systems

Unique Processing

Exclusive low-temperature, high-vacuum drying technique

- Preserves the enzymatic vitality and nutritional potential of ingredients

Not disassociated into isolated components

- The nutrients in Spleen (Desiccated) are processed to remain intact, complete nutritional compounds

Degreed microbiologists and chemists in our on-site laboratories constantly conduct bacterial and analytical tests on raw materials, product batches, and finished products

- Ensures consistent quality and safety

Vitamin and mineral analyses validate product content and specifications

- Assures high-quality essential nutrients are delivered

Whole Food Philosophy

Dr. Lee challenged common scientific beliefs by choosing a holistic approach of providing nutrients through whole foods. His goal was to provide nutrients as they are found in nature—in a whole food state where he believed their natural potency and efficacy would be realized. Dr. Lee believed that when nutrients remain intact and are not split from their natural associated synergists—known and unknown—bioactivity is markedly enhanced over synthetic nutrients. Following this philosophy, even a small amount of a whole food concentrate will offer enhanced nutritional support, compared to a synthetic or fractionated vitamin. Therefore, one should examine the source of nutrients rather than looking at the quantities of individual nutrients on product labels.

Each tablet supplies 330 mg bovine and ovine spleen.

Proprietary Blend: Bovine spleen and ovine spleen.

Other Ingredients: Honey, calcium stearate, and arabic gum.

Suggested Use: One tablet per meal, or as directed.

Sold to health care professionals.

Studies on nutrients generally use large doses and these studies, some of which are cited below, are the basis for much of the information we provide you in this publication about whole food ingredients. See the supplement facts for Spleen (Desiccated).
